**MONDAY, SEPTEMBER 16TH  
5PM TO 7PM ON ZOOM**

In this workshop you'll learn about one or two activities you can do to improve your interpreting skills, and practice doing those activities in a group so that you can confidently continue your skill development on your own long after the workshop has ended. This workshop will include: - a specific skill to be targeted - explicit activity directions - a transition path on how to reduce use of the LLM over time and rely more directly on your own critical reasoning and interpreting skills - ideas on how to integrate these activities outside of solo-practice (such as with a colleague, during professional development work days, etc.)

*This workshop offered at no cost courtesy of CDHY Professional Development HUB*

**Do you want to work on targeted skill improvement but find yourself doing the same things every time?**

**Do you sit down to interpret alone and draw a blank on what to do?**

**Do you have great sessions with a mentor but feel you can be doing more on your own between meetings?**
